VelaSmooth

A non-surgical treatment
for body contouring and
cellulite reduction

VelaSmooth is a revolutionary treatment to combat cellulite and reduce fat deposits. It uses a method which combines Bi-Polar Radio Frequency and Infrared Light plus tissue mobilization and suction to safely and effectively re-contour the skin's surface and shrink fat cells.

The VelaSmooth treatment is the first clinically proven medical device to treat cellulite, reaching a depth of penetration of the skin where optimum results can be obtained.

●●● How effective is the treatment?

The overall results depend on the severity of the area to be treated, and rely to an extent on no dramatic change to weight during the course of treatments. Results can be seen as the course of treatments progress, often taking between 6 to 8 weeks.

●●● How many treatments will I need?

This depends on the size and severity of the area to be treated. On average, a course of treatments may require twice weekly visits over a period of 6 to 8 weeks.

●●● How long does each treatment take?

Each session will take approximately 30 minutes. There is no down time, so patients can resume their normal activities immediately following each treatment.

●●● Will there be any side effects?

In the majority of cases there are no side effects. However, occasionally there may be some short-term reddening of the area that has been treated though there is no discomfort.

●●● Does the VelaSmooth procedure hurt?

There is no pain associated with the VelaSmooth treatment.

●●● Is the VelaSmooth procedure safe?

There is no risk to health associated with the VelaSmooth procedure. Side effects are minimal, if any, and there is no need for time off work before or after each treatment.

●●● How much does it cost?

The costs will depend on the extent of the treatment, and the number of treatments required. This will be discussed at your initial consultation prior to commencement of any procedure.

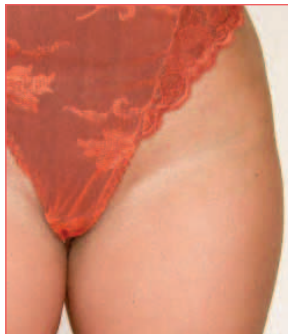

●●● In safe hands

All VelaSmooth procedures are carried out under the careful supervision of Dr Rupert Gabriel (Member of the British Association of Cosmetic Doctors), a practicing GP. Patients are treated in modern facilities at the Snowberry Lane Clinic in Melksham, using state of the art equipment. All patients attend an initial no obligation consultation with Dr Gabriel where he will be happy to answer any questions and advise on the best treatment for each individual case.

VelaSmooth is just one of a number of non-invasive cosmetic surgery procedures offered by Dr Gabriel at the Snowberry Lane Clinic. Further information can be found on the website at www.snowberrylane.co.uk
