

MICRO- SCLEROTHERAPY

Achieve clearer, more attractive skin with Snowberry Lane Clinic's cosmetic laser techniques ensuring thread veins collapse and disappear.

Rest assured, Microsclerotherapy is a safe and effective treatment, with no need for anaesthetic and the majority of procedures take place with little down time and minimal side effects.

DOES IT HURT?

This is not a painful procedure. The injections are made superficially with a tiny needle. Some people feel nothing, some little stings. This will vary from person to person.

HOW DOES IT WORK?

A solution is injected into the veins. This causes the lining of the vein to swell and become sticky. Compression is applied to help close the veins. Over a period of time the vein will heal and fade away.

WHAT WILL MY LEGS LOOK LIKE IMMEDIATELY AFTER THE TREATMENT?

The injections will cause some redness and welts, possibly with irritation. Your legs may look bruised. The veins may also look worse before they look better. Sometimes a darker colour appears under the skin, but by day 10 to 14 you will see an improvement. Within 4 to 6 weeks the veins will look very much as they did before the treatment and the full benefit will be seen after approximately 12 weeks.

OTHER RECOMMENDED TREATMENTS

LASER THREAD VEINS

Achieve clearer, more attractive skin with cosmetic laser surgery, ensuring thread veins collapse and disappear without the need for injections and anaesthetic, causing minimal side effects.

IN SAFE HANDS

The treatment is performed by one of our qualified cosmetic nurses, who will be supported by a team of highly trained professionals dedicated to providing the best possible care before, during and after your treatment.
